What happens after the application is submitted?

Your application is processed by the Port of Piteå and the operator ShoreLink. The operator has security regulations for the area, which also form the basis of our assessment

ISPS-area

Port of Piteå is an ISPS area and thus a protected area where access requires a special permit. If you need to stay in the area, an approved permit is required, which you apply for at Port of Piteå.

Following the September 11, 2001 terror attacks in the U.S., the International Maritime Organization (IMO) updated the Solas (Safety of life at sea) convention and created an appendix known as the ISPS (International Ship and Port Facility Security) Code to protect maritime operations from external threats.

The code applies to ships and ports, i.e. locations where people and/or goods are transported to and from ships and port services are provided. The new regulations came into effect on July 1, 2004 and are known in Swedish as sjöfartsskydd (protection of maritime operations), to differentiate these particular security questions from other matters of maritime security.

The entire operations area of Port of Piteå is covered by the ISPS code and therefore assigned perimeter protection, a Port Facility Security Officer, remote controlled gates, recordable CCTV and manned exit and entrance 24/7/365.
